

SELECTING A TARGET DESTINATION USING SEEK COST
INDICATORS
BASED ON LONGITUDINAL POSITION

5

Abstract of the Disclosure

A processor is configured to perform a method (110) including a step of deriving lateral offset indicators (1062) from a longitudinal position measurement (130). Improved seek cost indicators (1063) are generated, some or all based on a respective lateral offset indicator (140). Then a target destination is selected using at least one of the improved seek cost indicators (150,160).
